Description	
Dear team,	
schema elements like <code>"//xs:annotation/*"</code> could be used to provide information to be handled by applications. For applications it may be easier to get this information from a SCM file instead of (multiple?) schema documents.	
Problem: currently it is not possible to access these fields using a SCM file because annotations are not retained; the original schema documents must be included as well	
Feature Request: would it be possible to add a new configuration setting forcing the export to retain annotations, e.g. as references <code><scm:annotation id="..."/></code>
